

A land cover mapping, modeling, and monitoring system for the Delaware River Basin

Dr. Claire Jantz – Project lead

Dr. Scott Drzyzga – Co-investigator

Alfonso Yañez Morillo – Research analyst

Antonia Price – Project coordinator

Joshua Barth – Student fellow

Workshop agenda

Introductions

Project Background

Watershed Identity

Lunch

Scenario Development

Objectives

Help decision-makers to think about the DRB by:

Listening to you and reading a lot

Producing high resolution land cover data

Developing basin-wide modeling tools

Conduct a feasibility study to gage interest in long-term land cover change monitoring

 <http://drbproject.org>

F O U N D A T I O N

Goals for Today

Discuss current characteristics of the basin

Modified SWOT analysis

- ▶ Strengths and Weaknesses- Current
- ▶ Opportunities and Threats- Future

We need your input!

Questions?

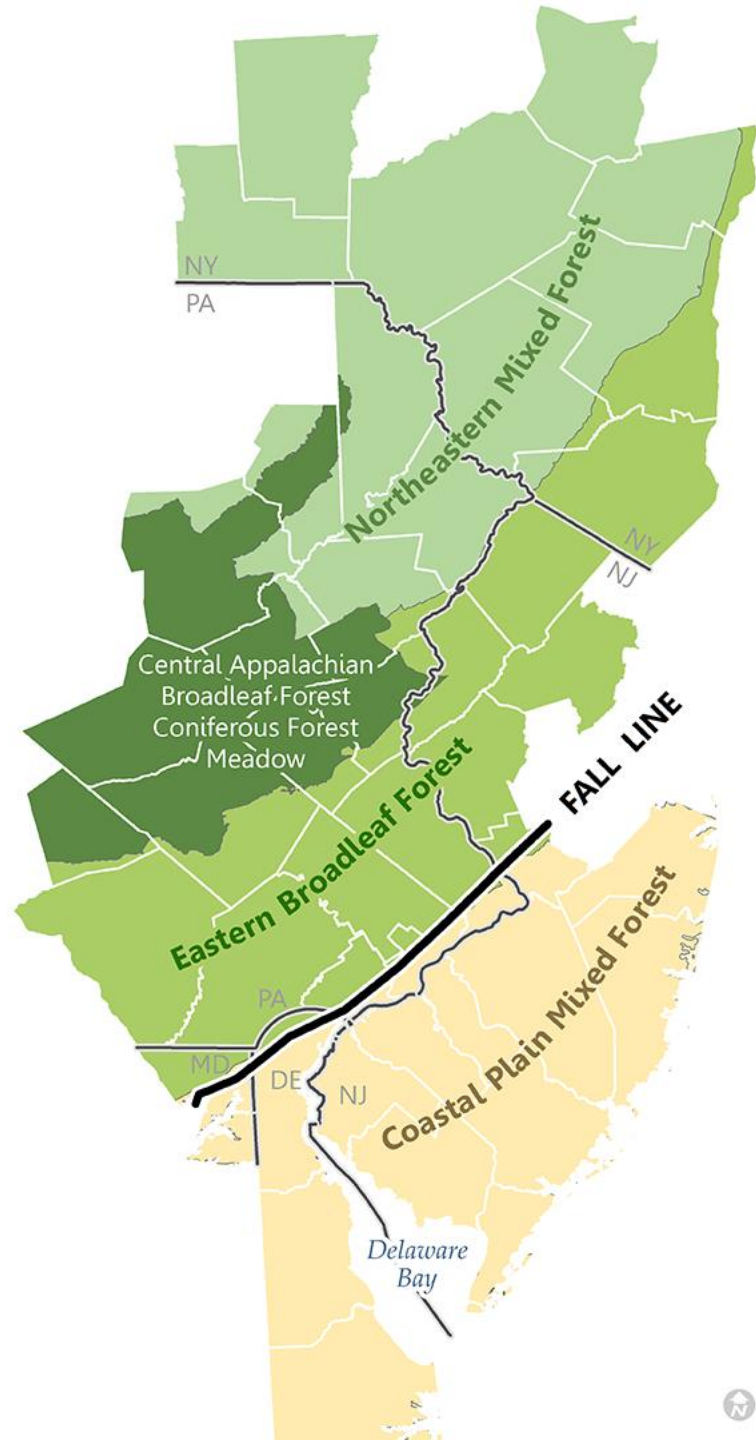

The DRB - what does the data tell us?

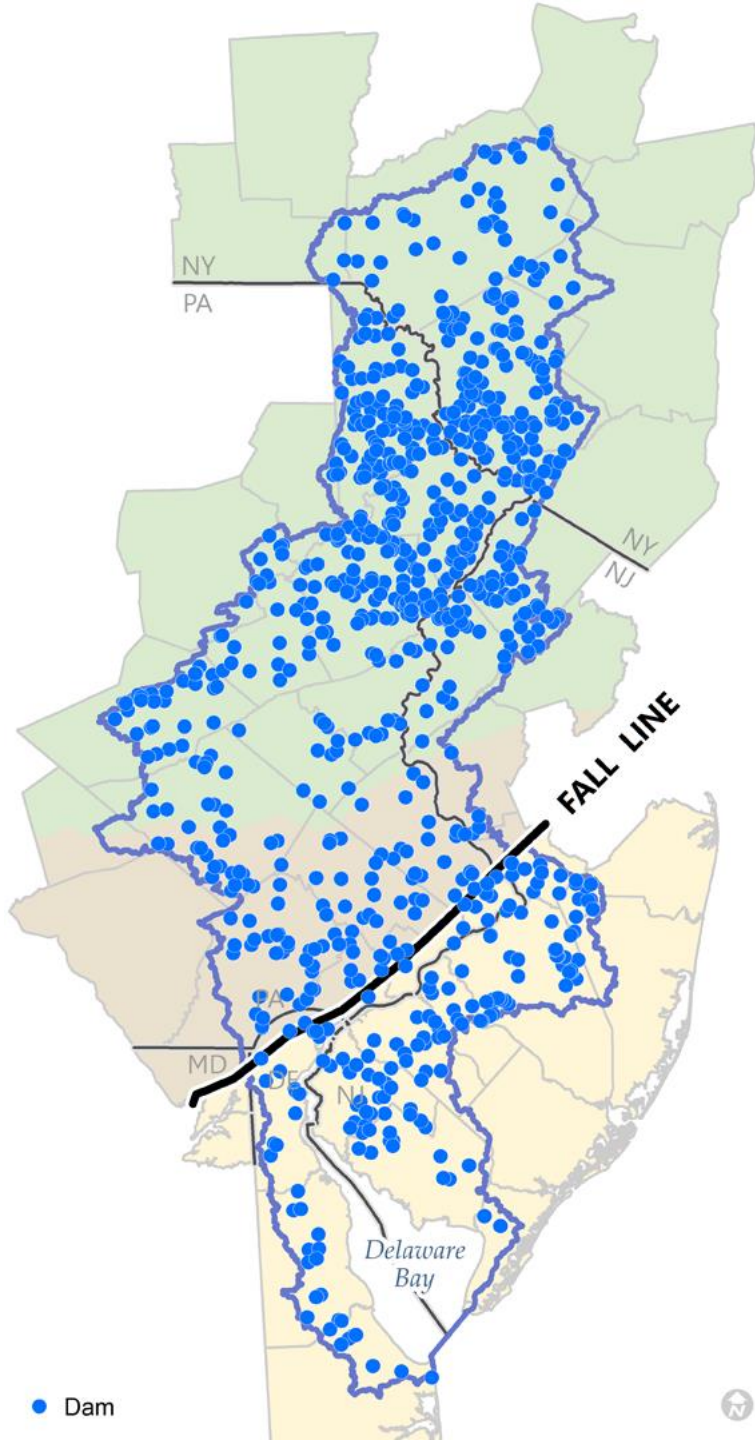

Introduction: physical setting

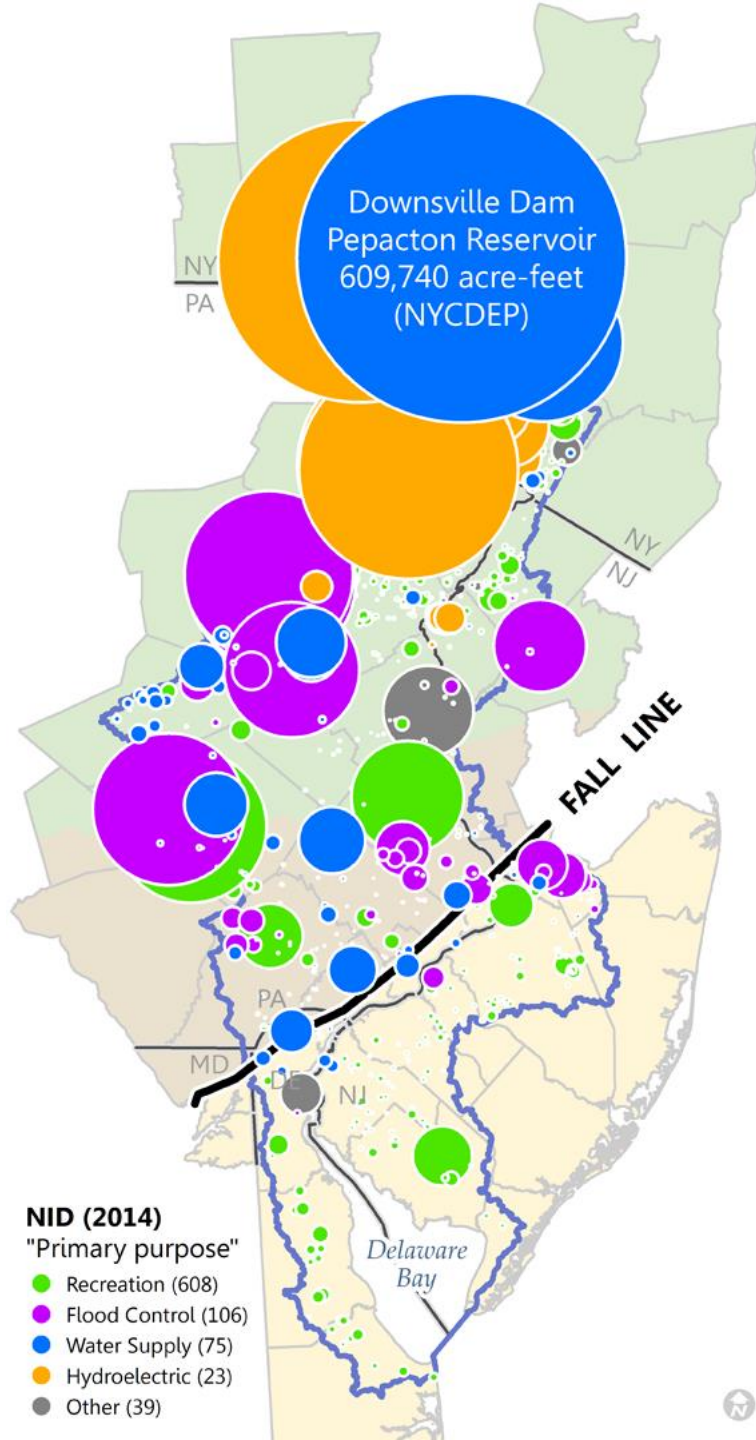

People & housing

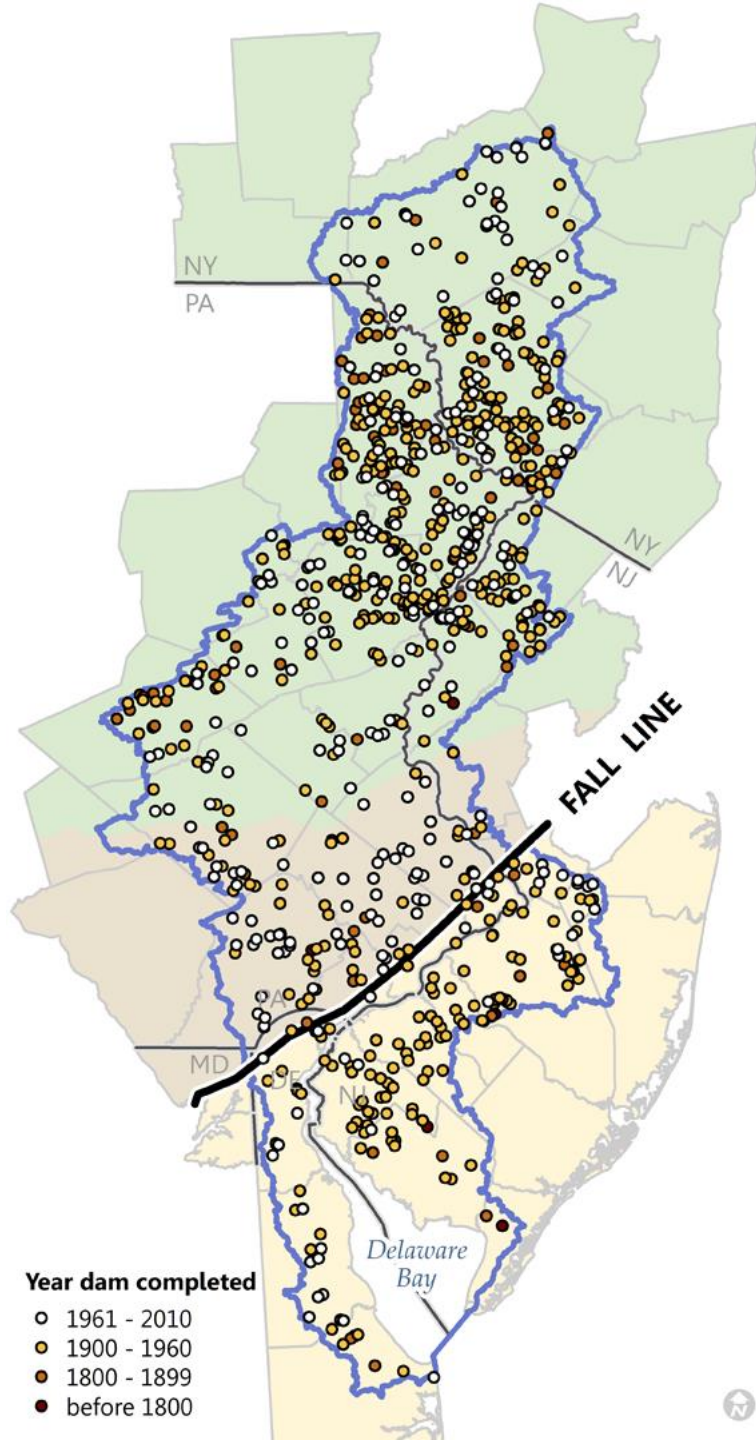

Economics & commuting patterns

Recent land use change trends

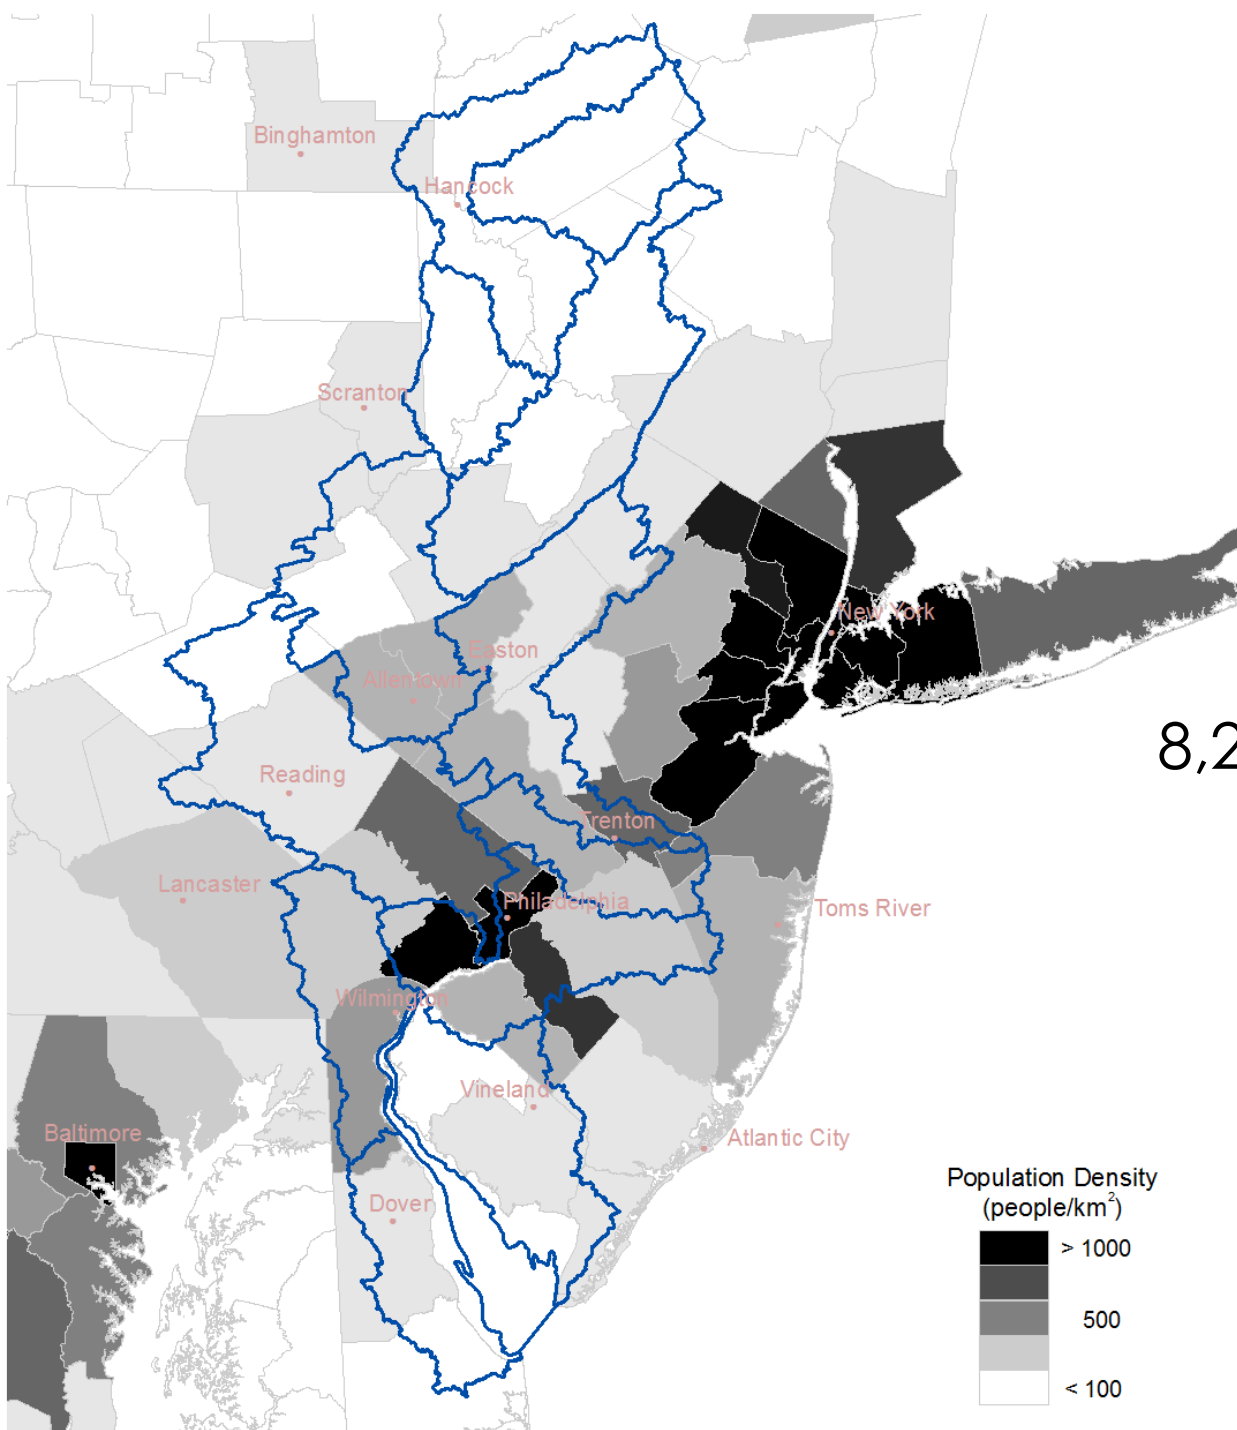

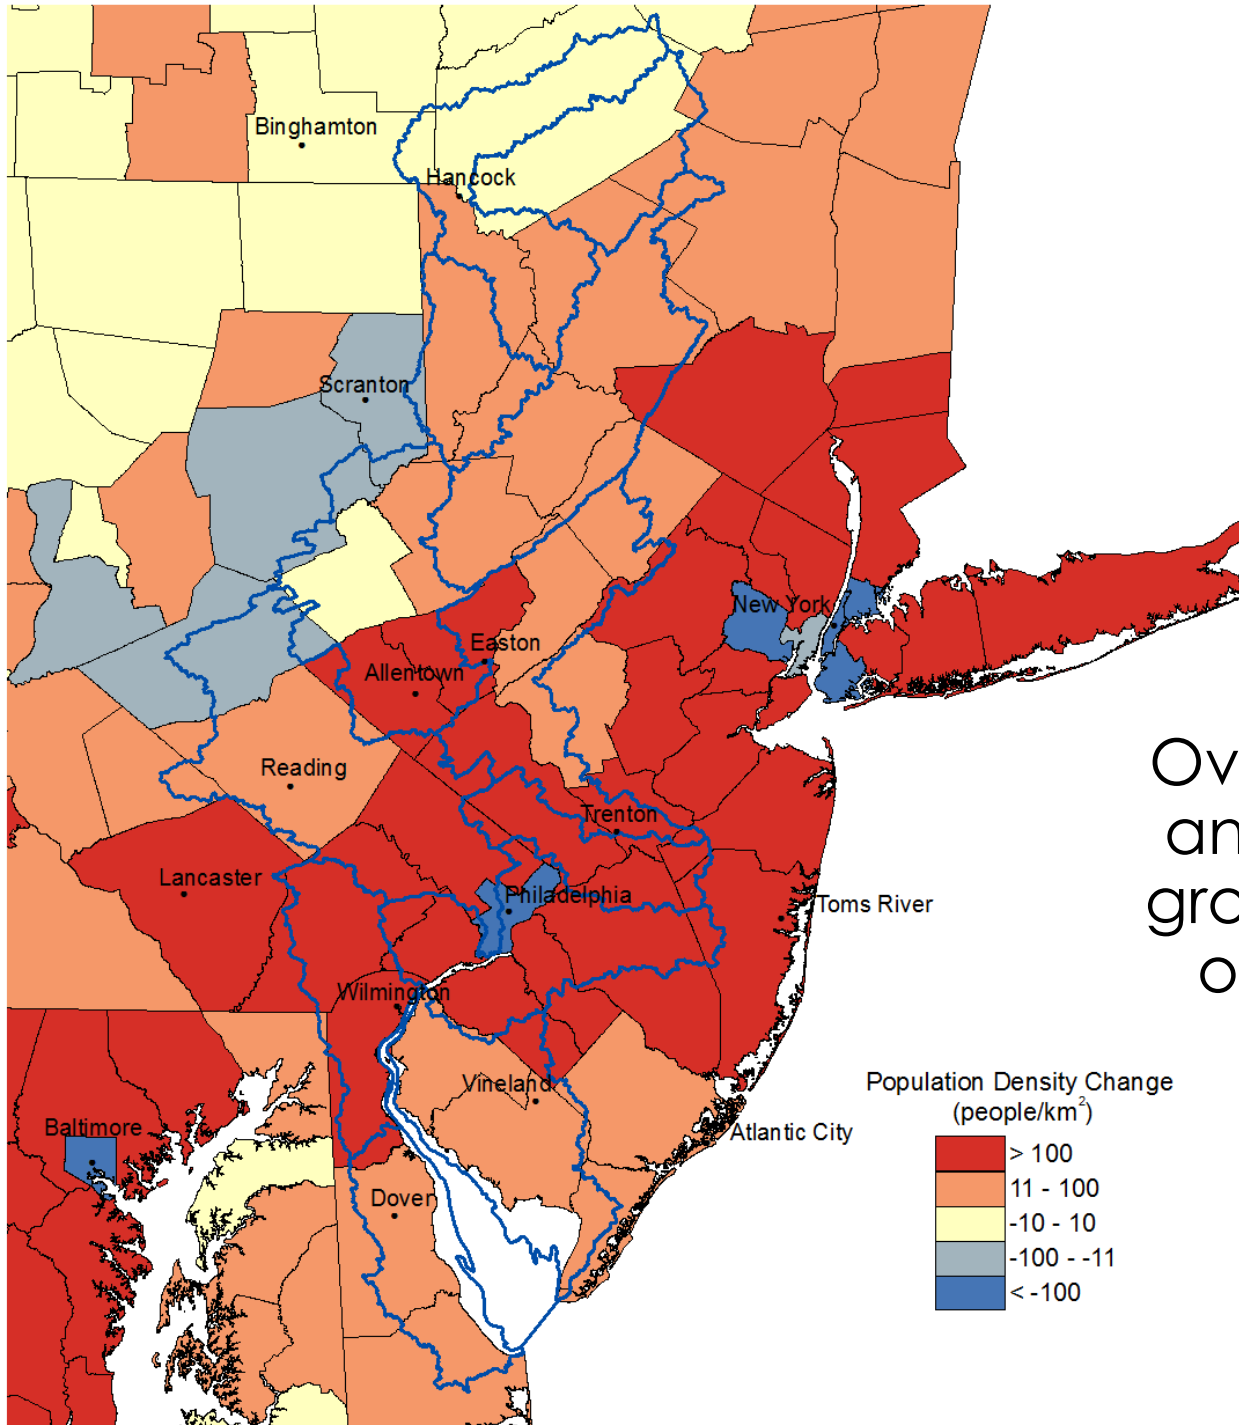

Huntington Pike Dam Removal, 2007
@ Pennypack Creek

| Primary purpose of dam | Count | Avg. age (yrs) | Storage (acre-ft) |
|---|-------|----------------|-------------------|
| Recreation | 608 | 82 | 585930 |
| Flood control | 103 | 41 | 847630 |
| Water supply | 75 | 95 | 926350 |
| Hydroelectric | 23 | 68 | 1128900 |
| Other | 17 | 62 | 59170 |
| Fire protection, stock, fish pond | 13 | 50 | 960 |
| Fish & wildlife pond | 4 | 95 | 5770 |
| Irrigation | 3 | 56 | 340 |
| Tailings | 2 | 35 | 1330 |
| Source: USACE NID (2014) and our calculations | 851 | 76 | 3,556,400 |

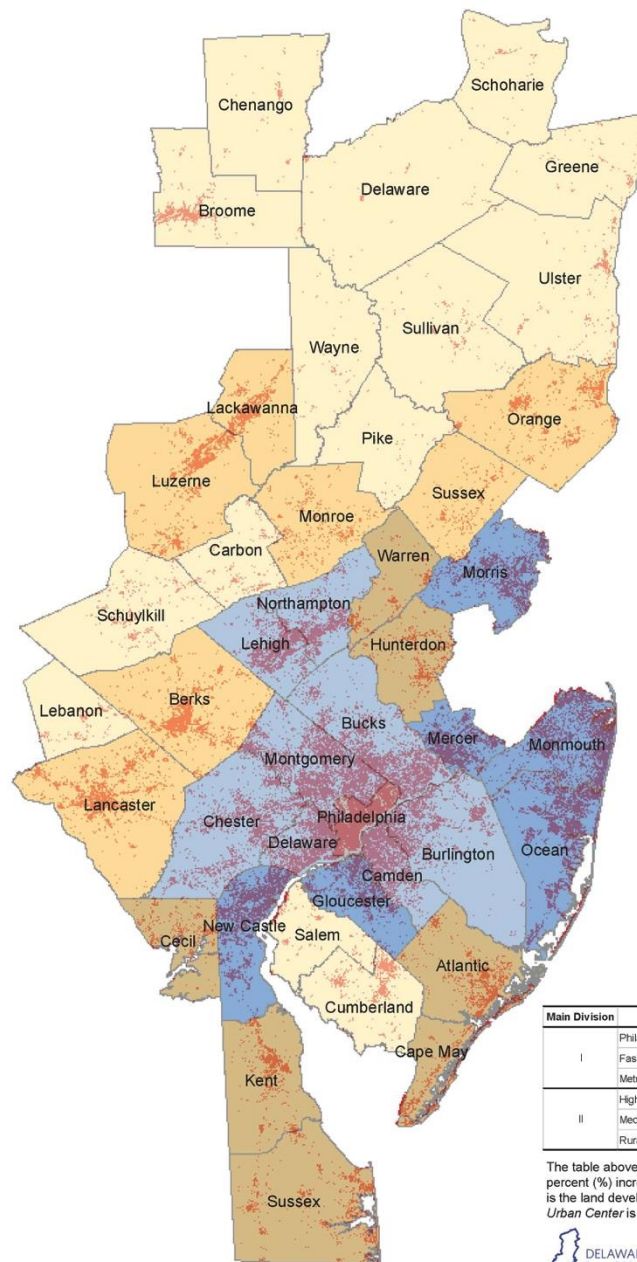

8,268,500 people call
somewhere in the
DRB 'home'.

3,625,600 workers*
work somewhere
in the DRB.

Over the last 50 years and despite regional growth, a lesser share of people live in the DRB's largest city.

DELAWARE RIVER BASIN COUNTY CLASSIFICATION BASED ON URBAN GROWTH AND URBANIZATION DEGREE

Scale 1:2,000,000

| Main Division | Groups | Total Growth | Urban Area | Largest Urban Center |
|---------------|-------------------------|--------------|------------|----------------------|
| I | Philadelphia | 12.05 | 83.07 | 304.81 |
| | Fast Growth Metro Areas | 2.55 | 30.78 | 190.35 |
| | Metro Areas | 1.15 | 32.95 | 221.99 |
| II | High Growth Sub-Urban | 0.55 | 9.95 | 32.29 |
| | Medium Growth Sub-Urban | 0.31 | 9.45 | 67.93 |
| | Rural Areas | 0.09 | 3.17 | 14.41 |

The table above shows the mean value within each group. *Total Growth* is the percent (%) increase of urban area during the period (1996-2010). *Urban Area* is the land developed out of the available land in each county (%). *Largest Urban Center* is measured in square kilometers (km²).

Information

Public administration

Employment concentration

by HUC8 watershed,
by 2-digit NAICS,
and for 2013

HUC8 watershed / Base region

Health care and social services

Arts, entertainment & recreation

Accommodation and food services

What do the green colors mean?

Employment LQ

- 2.001 - 20.00 Concentrated
- 1.101 - 2.000
- 0.901 - 1.100 on par
- 0.501 - 0.900
- 0.060 - 0.500 Sparse

How were the LQs calculated?

$$LQ_{iwB} = \frac{SE_{iw} / TE_w}{SE_{iB} / TE_B}$$

Where:

LQ = the Location Quotient for industry sector i in watershed w and relative to the base region B (see map at right);

SE = Employment in sector i ; and

TE = Total employment.

Summary

The maps at left were built using the US Census Bureau's 2013 Longitudinal Employer-Household Dynamics data, which track payroll employment by census block and by 2-digit NAICS. We aggregated the census blocks that comprise each HUC8 watershed for analysis. Note: self-employed persons are not represented by these data.

A Location Quotient (LQ) is a valuable way to quantify how employment is concentrated in a particular industry in a particular watershed relative to how much it is concentrated in the hosting base region (the map above shows the five-state base region we used). A LQ can reveal what makes a particular region unique; in this case, unique in terms of jobs.

Light grey tones indicate a watershed that hosts a smaller share of workers than the base region (e.g., the paucity of those working in the Upper Delaware and in the Finance and Insurance sector). Dark green hues indicate a watershed that hosts a share of employment that is larger than the base region share (e.g., those working in the Manufacturing sector and in watersheds containing cities like Allentown, Bethlehem and Trenton). We're interested in the dark green areas because the predominance of jobs in just one or a few sectors can influence the uniqueness - identify - of the area.

Watershed identity

Does the Delaware River Basin have a cohesive regional identity or many fragmented identities?

How important is it to plan for the future by thinking about the whole watershed?

Open Discussion

Lunch!

The Watershed in 2070

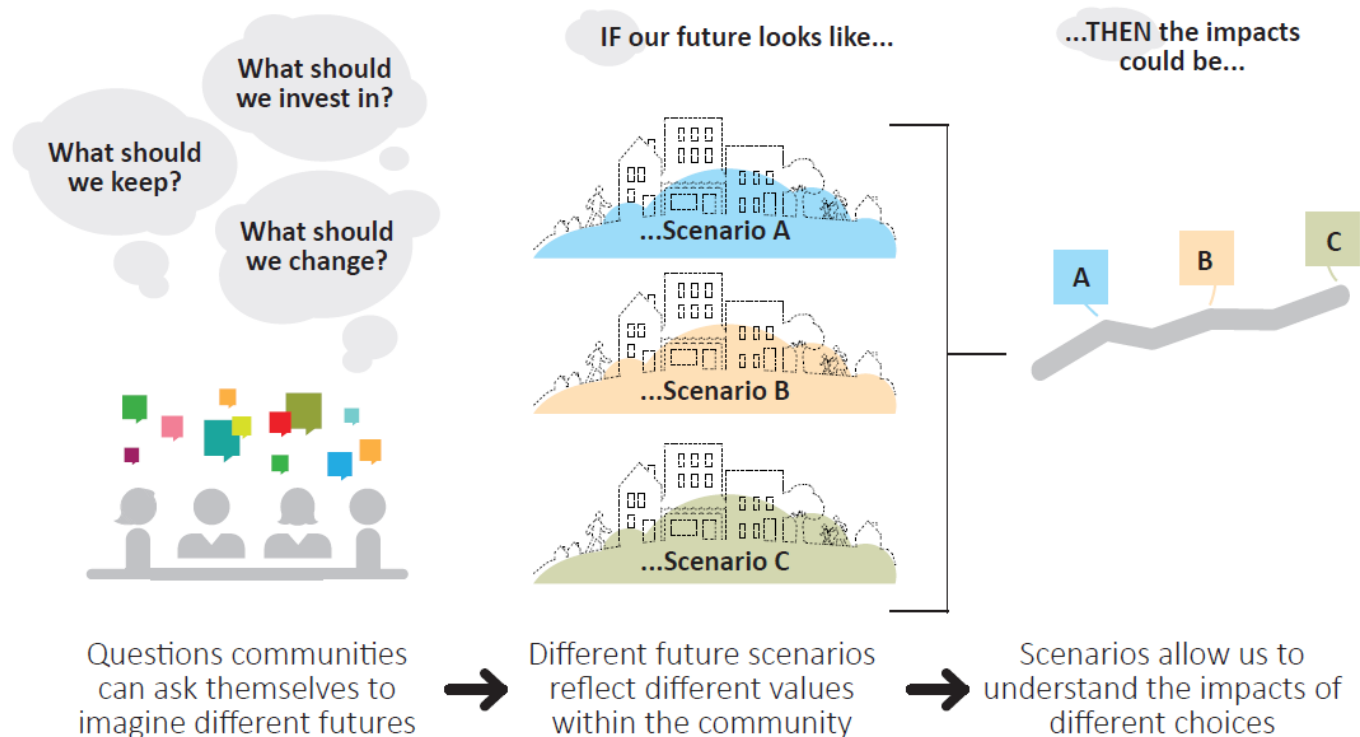

Our approach to forecasting land use change

- ▶ Community driven
 - ▶ What do you value?
 - ▶ Iterative
- ▶ Data driven
 - ▶ Reflect current trends
 - ▶ Best available forecast data
- ▶ Use scenarios

The Watershed in 2070

Scenarios are plausible stories about the possible futures and range of changes that could occur

Let's get to work

Session 1

- ▶ What do you value? What would you like to preserve? What are the current challenges & opportunities?
- ▶ Report back

Session 2

- ▶ What would you like to change? What are future challenges & opportunities?
- ▶ Report back

What's next

More workshops coming up

A map of the Delaware River Basin watershed, showing the river flowing from the north (near New York) to the south (into the Chesapeake Bay). The basin is shaded in light blue. Major cities and towns are marked with yellow stars and labeled: Allentown, Philadelphia, Newark, and Camden. The map also shows the borders of Pennsylvania, New York, New Jersey, and Delaware.

Delaware River Basin

Watershed Identity and Scenario Development Workshops

10:30 - 3:00

October 29, 2015: Philadelphia, PA
November 10, 2015: Narrowsburg, NY
January and February, 2016:
*Phillipsburg, NJ; Dover, DE; Reading, PA**

* Final meeting dates and locations TBD for 2016

www.drbproject.org/workshops

What's next

On-line survey (coming in winter 2016)

- ▶ A chance for you to contribute individually
- ▶ A chance for others to contribute

Draft scenario storylines (coming in spring 2016)

- ▶ Incorporate best data and findings from workshops and survey
- ▶ We'll be asking for your feedback

Final scenario storylines (summer 2016)

Scenario forecasts (fall/winter 2016)

Thank you!
